

The “ STUNNING SYSTEM” one day fixed teeth over implants by First dental implant center.

Stunning System uses a new generation of anterior teeth that deliver lifelike esthetics. The texture of the labial surfaces reproduces the mild ripple effect (perikymata) seen on natural enamel surfaces. The design of the anterior arch has a decisive effect on the facial appearance of the patient. Highly individualized to complement your facial anatomy. Stunning System uses a CAD CAM designed titanium bar that connects all implants and provides strength for the over implant prosthesis by enduring the occlusal forces, and preventing excessive forces on the implant.

Option 2.

The Stunning System Zirconia Implant Bridge.

Zirconia boasts high bending strength and less resistance to staining , outstanding density, smooth finish.

Additional 6500.00 dollars per arch for Stunning Zirconia.

Option selcted: .....

PMMA High glossed composite Vs. Zirconia
